Chop Saw

The Cutting Edge Saw™ Series by **BN Products-USA™** is a popular tool for cutting rebar and other materials, known for its ability to make clean, burr-free cuts with minimal sparking. It's a cold-cutting saw, meaning it minimizes heat and sparks during the cutting process, resulting in a cool-to-the-touch cut. The saw is available in both corded and cordless (24V) versions.

Key features and benefits of the Cutting Edge Saw:

- **Low RPM and cold cutting:** The saw's low rotational speed reduces heat and sparks, resulting in a safer cutting experience and cleaner cuts - Burr-free and cool-to-the-touch cuts - The low-RPM cutting action minimizes burrs and leaves the cut material cool to the touch, unlike abrasive saws
- **Safety features:** Easy to maneuver in tight spaces - 3-position removable side handle and a rotating trigger handle - Blade guard to minimize blade exposure

Why Choose the Cutting Edge Saw over Competitors?

- **Blade replacement:** The handheld models come with **two** long-lasting carbide-tipped blades
- **Battery life** (for cordless models): The cordless version comes with **two batteries** and a **charger**, allowing for continuous operation - and no need to purchase batteries separately!
- **Match YOUR Needs:** BN Products-USA offers various models, including the BNCE-20, BNCE-30, and BNCE-45, which can cut different rebar sizes (e.g., #6, #8, #10)
- **The BN Products-USA™ Cutting Edge Saw™** is the award-winning ORIGINAL tool of its kind, and is continually developed with expert improvements, and safety engineering
