DBS-16H

HYDRAULIC IN-PLACE REBAR BENDER

“Unique, one-of-a-kind tool”

Ideal for bending tails in block wall & bridge construction!

The Ultimate In-Place Bender

The DBS-16H is a portable, electric/hydraulic rebar bender designed for bending rebar "in-place" on construction sites. It's ideal for bending rebar tails in concrete and block wall construction. This tool can bend rebar up to #5 (5/8") grade 60, and it can achieve a 90-degree bend in under four seconds.

Key Features

- In-place Bending: Specifically designed for bending rebar directly on the job site, even in tight spaces.
- Portability: Weighing only 26.5 lbs, it's lightweight and easy to handle on construction sites.
- Speed and Efficiency: Bends rebar up to 90 degrees in under 4 seconds.
- Power Efficiency: Draws less than 9 amps, making it suitable for use with standard extension cords.
- Versatility: Can bend rebar at any height or location along the bar.
- Bending Radius: Features a 1.25" bending radius, offering precision and strength.

Applications

- Concrete Work: Ideal for bending rebar tails in concrete foundations, walls, and columns.
- Block Wall Construction: Specifically designed for bending rebar in block walls, allowing for efficient and accurate tie-ins.
- General Construction: Suitable for various rebar bending needs on any construction project.
